

Attorney Docket No. 356-014-USP

Amendment to the Abstract:

Please cancel the originally-filed Abstract found on page 63 of the originally-filed specification and please enter the following new Abstract provided in clean text.

An inexpensive and reliable dry process based capacitor and method for making a self-supporting dry electrode film for use therein is disclosed. Also disclosed is an exemplary process for manufacturing an electrode for use in an energy storage device product, the process comprising: supplying dry carbon particles; supplying dry binder; dry mixing the dry carbon particles and dry binder; and dry fibrillizing the dry binder to create a matrix within which to support the dry carbon particles as dry material.
